

Task 7

V1 Time: 1 hour

V2 time: 10 minutes

What each got wrong:

V1 didn't get anything wrong

V2 originally got the timezone wrong but that was quickly fixed

Which version would I keep: V2

Reason: In terms of the code itself, V2 is much less redundant, omitting an if/else statement and just using a try/catch block to take care of exceptions. Furthermore, it makes better use of variables to increase overall readability.

One thing I understand about the terminal that I didn't on September 3: I now know more about cmdlets and the overall PowerShell language, as it has a lot of similarities to Java that I was originally aware of, such as variables and if/else statements.
