

## Task 5 Criteria

- Create a new directory within the Meal Receipt directory
- Title of the directory should be today's date in DD-MM-YYYY format
- Input should be nothing at the moment besides an optional error message for debugging
- Output should be said directory
- Subsequent executions of the script should not cause any errors
- If the directory already exists when executing the script, add content to the current day's error log: a message indicating which exception was thrown/error occurred
- All logs should be contained in the Error Logs directory which already exists inside the Meal Receipts directory
- No files should be fully overwritten; the logs should only be added to/expanded
- No files should be deleted
